**– The MAILING DATE of this communication appears on the cover sheet with the correspondence address –
Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Mitchell (US Patent 5305180).

With respect to claim 1 Mitchell teaches a component mounting system (Fig. 4) for mounting a component (Fig. 2, element 20) within a casing (Fig.1), including a component support (Fig.4 the entire structure) securable to a said casing; at least one post (Fig. 5b, element 95) coupled to the component support and being operable to be engaged in at least one associated recess (Fig. 2, element 28) in the component, the at least one post being movable between a component engaging position (inward towards the component) and a component non-engaging position (outward away from the component); and a post moving device (Fig. 5a, element 41) operable to move and retain the at least one post in a selected one of said component engaging position and said component non-engaging position.

With respect to claim 2 and with all the limitation of claim 1, Mitchell teaches that the at least one post is mounted on at least one sprung support (Fig.11, element 97).

With respect to claim 3 and with all the limitation of claim 2, Mitchell teaches that the at least one sprung support biases (column 6, lines 41-56) the at least one post towards the component engaging position.

With respect to claim 4 and with all the limitations of claim 1, Mitchell teaches that the post moving device is slidable (column 8, 30-35) between two positions so as to remove and retain the at least one post in either said component engaging position or said component non-engaging position.

With respect to claim 5 and with all the limitations of claim 1, Mitchell teaches the system provides for grounding (Fig. 2, element 39 column 7, lines 66-68) of a component through the component support.

With respect to claim 6 and with all the limitations of claim 1, Mitchell teaches that the casing is in the form of a chassis (Fig. 2).

With respect to claims 7-13 and with all their respective dependencies, Mitchell teaches all of the limitations of the claims and the rejections are the same as written above with the extra feature that the component mounting system is in a computer and more specifically a personal computer (Fig.1).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ivan H. Carpio whose telephone number is 571-272-8396. The examiner can normally be reached on M-R 6:00am - 4:30pm.
